There has recently been an update to the software behind our eForm. As a result, you **MAY** need to temporarily change a browser setting if you use Internet Explorer. Firefox users do not need to make this change.

For **Internet Explorer** users, you can view this setting by doing the following:

- Go to the ‘Gear’ in the upper right hand corner and select “Compatibility View Settings”

- Uncheck the box that says “Display intranet sites in Compatibility View”, then click “Close”

- When you are done with the eForm, you may choose to put this setting back. If you don’t, your browser may look different when using Reporting Services and certain other applications.
Research Funded Transactions

- Please remember to select an option (Yes or No) in the highlighted section below. In the past, this section defaulted to ‘No.’ The eFORM no longer does this for you.

Attachments

- The attachment pop-up window looks different, but it functions the same. You will still add a document in the same way.
