Welcome to the Emergency Preparedness Program at Wichita State University
What is our campus emergency preparedness program?

- It is preparation for members of our program to react to various emergencies that may occur on our campus

- Members of the emergency preparedness team complete a training program, attend meetings, and participate in all campus safety preparedness activities such as tornado drills
What types of emergencies may occur on our campus?

- Fire
- Tornado
- Power Outage
- Gas Leak
- Flooding
- Explosion
- Bomb Threat or a Suspicious Object
- Chemical Spill or Hazardous Materials Release
- Active Shooter
Who is part of the emergency preparedness program at WSU?

- Chief Emergency Building Coordinators (CEBCs)
- Emergency Building Coordinators (EBCs)
What is the role of the Chief Emergency Building Coordinator?

The role of the Chief Emergency Building Coordinator (CEBC) includes preparing a plan for emergency response for her/his building, implementing the plan in an emergency, and serving as the communications liaison between building occupants and campus services and agencies in both emergencies and day-to-day operations.

The CEBC position involves core responsibilities assigned to an individual in each campus building and includes the following:

- Emergency Preparedness
- Emergency Response
- Communication Liaison
What is the role of an Emergency Building Coordinator?

The role of the Emergency Building Coordinator (EBC) is to react quickly to all emergencies and lead the procedures for sheltering-in-place or evacuation to their assigned assembly area. They will immediately provide a building status report to the CEBC and emergency responders.

The EBC is responsible for knowing all inclement weather shelter locations, emergency exit locations, meeting points, and evacuation procedures for their building.
Why does WSU need CEBCs and EBCs as part of the Emergency Preparedness Program?

In any type of emergency there is a need for immediate response, leadership, and clear communication to ensure the greatest safety for the entire campus location. WSU must be prepared to act immediately until outside help can arrive. Having trained CEBCs and EBCs will increase WSU’s response capability which can result in saving lives.
What does a CEBC and EBC need to do now?

You will complete a training program with several courses which occur either in a classroom or online. These sessions will explain in detail the responsibilities of a CEBC/EBC and train on how to respond in various types of emergencies.
What are the components to the CEBC and EBC training program?

This tutorial is the first step in becoming trained as a CEBC/EBC. Following are the other components to the training program:

- General Overview Training (Classroom – 1 hour)
- Emergency Response Training (Online – 1 hour)
- Inclement Weather Training (Online – 30 minutes)
- Active Shooter Training (Classroom – 1 hour)

The CEBCs will also complete the Emergency Evacuation Plan Online Training
How does a CEBC and EBC know when to attend or complete these trainings?

As trainings sessions and logistics are finalized, you will receive communication via emails to notify you of the dates/times/locations for upcoming classroom trainings and directions for completing the online trainings.

The communication will also give you details on any registrations you need to complete and any final dates for completion of the online training modules.
THANK YOU!

Wichita State University appreciates your dedication and service to ensuring we are ready to react should any type of emergency occur at WSU.
