Master of Science in Biological Sciences

Wichita State University’s Master of Science program offered by the Department of Biological Sciences provides an advanced education with either a research thesis or non-thesis option. A variety of specializations in the broad areas of ecology, molecular biology, microbiology, cell biology and evolutionary biology are available. All incoming students are assigned to a temporary graduate advisor; typically, by the end of the first semester, students choose a permanent graduate advisor and committee. The advisors work with students to develop a plan of study that meets the student’s educational goals.

Admission Requirements
Completed application forms and two official transcripts of all previous academic work must be submitted to the Graduate School by March 1 for fall semester admission, and by October 1 for spring semester admission. Admission as a full-standing student requires:

1. The completion of 24 credit hours in biological sciences and 15 credit hours in chemistry;
2. An overall grade point average of at least 2.750 (4.000 scale) for the most recent 60 credit hours completed;
3. A grade point average of at least 3.000 (4.000 scale) for all undergraduate biological sciences courses;
4. A one-page statement of purpose that addresses the student’s areas of interest in biology;
5. Three letters of reference from science faculty; and
6. Acceptable score on the TOEFL, IELTS, or PTE-Academic for non-native speakers of English.

Students who do not meet requirements 1–3 but who wish to begin graduate coursework may qualify for conditional acceptance into a non-degree category.

Degree Requirements
Students accepted into the MS program in biology may pursue either the thesis option or non-thesis option for their MS degree. All MS graduate students in biology must earn at least 16 credit hours from the Department of Biological Sciences. A maximum of 6 credit hours can be transferred from other institutions and a total of 9 credit hours can be from departments outside of biological sciences. All MS graduate students must enroll in BIOL 797 and give professional presentations in this course in two semesters. Even when graduate students are not enrolled in BIOL 797, attendance at departmental seminars is expected. All graduate students must complete the Department of Biological Sciences’ requirement for training in professional and scholarly integrity by the end of the student’s first semester in the program.

Research Facilities
The department is housed primarily in Hubbard Hall with large, modern research laboratories. Core laboratories have been established for protein chemistry, molecular biology, and digital microscopy. Shared facilities include an accredited animal care suite with a surgical theater and micro-CT scanner, a greenhouse, cell culture suites, and herbarium and vertebrate study collections. Major research instrumentation is available for molecular biology and genetic studies, carbohydrate analyses, protein biochemistry, confocal and fluorescence microscopy, and analytical separations.

Relevant campus facilities include scanning electron microscopy, GC/MS, X-ray diffraction spectroscopy, atomic force microscopy, human performance laboratories, biomechanical testing equipment, and the Ablah library that houses more than 20,000 titles in biological sciences.

The department manages the WSU Biological Field Station, which consist of the Ninnescah, Gerber, Sellers and Youngmeyer Reserves. These reserves contain prairie, riparian woodland, and wetland habitats that provide excellent opportunities for field research. A modern research and teaching facility is located on the Ninnescah Reserve.

Financial Aid
A number of graduate teaching assistantships, awarded on a competitive basis, are available to qualified students. Recipients are required to teach eight to ten hours per week, primarily in laboratories, for which they receive a stipend for the academic year and are eligible for a tuition waiver.
Non-resident graduate students who are awarded graduate teaching assistantships are assessed tuition at the Kansas resident rate. A limited number of graduate research fellowships are awarded annually, but recipients are not eligible for a tuition waiver.

**Faculty**

**James Beck**, Assistant Professor, PhD, Washington University, 2007. Plant systematics: species delimitation/discovery, phylogeny reconstruction, cytology, rare species biology, phylogeography

**George Bousfield**, Lawrence M. Jones Distinguished Professor, PhD, Indiana University, 1981. Reproductive endocrinology: glycoprotein hormones, FSH glycoforms and aging, carbohydrate biochemistry

**William J. Hendry III**, Professor and Chair, PhD, Worcester Foundation for Experimental Biology/Clark University, 1982. Endocrine disruption; hormone-dependent carcinogenesis; epigenetics (DNA methylation, microRNA expression)

**Gregory Houseman**, Associate Professor, PhD, Michigan State University, 2004. Plant community ecology: restoration of ecological communities, community assembly, ecology of invasive plants

**Mary Liz Jameson**, Associate Professor, PhD, University of Kansas, 1997. Insect systematics: morphological and molecular phylogenetics, biogeography, bioinformatics, integrating genomics and biodiversity data, insect-host plant interactions

**J. David McDonald**, Professor, PhD, Kansas State University, 1989, Biochemical genetics, medical genetics, mammalian genetics, molecular genetics, pathogenic microbiology

**Christopher M. Rogers**, Professor, PhD, Indiana University, 1988. Ecology, demography and conservation of birds; optimality theory and adaptive body mass/fattening strategies

**F. Leland Russell**, Associate Professor and Graduate Coordinator, PhD, University of Texas, 1999. Plant population ecology; plant-animal interactions; herbivores’ effects on plant populations; savanna dynamics

**Mark A. Schneegurt**, Professor; PhD, Brown University, 1989. Applied and environmental microbiology; microbial ecology; hypersaline systems; astrobiology; alternative energy; natural products discovery; environmental science

**Bin Shuai**, Associate Professor; PhD, University of California Riverside, 2003. Molecular genetics of plant development; molecular mechanisms of host-pathogen interactions

**Shang-You Yang**, Associate Professor, PhD, Thornhill University, 2001. Orthopaedic research including biomaterials and biocompatibility: tissue engineering; drug delivery and gene therapy; and cancer interventions

**Li Yao**, Associate Professor, PhD, University of Aberdeen (UK), 2006. Neurobiology: electric fields guided brain neuron migration, spinal cord repair and regeneration, peripheral neuron repair and regeneration, tissue engineering
