1. Take two even size stools to place underneath the baseboard to begin with.
2. Clean the surface area of the baseboard for any debris or uneven surface with a soft cloth and sand paper.
3. Apply first coat of yellow paint to the baseboard and let it dry for approximately 30 min.
4. Apply second coat of yellow paint to the baseboard for smoothness and places where wood color is visible.
5. Take measurements for the black tracks to paint and cover the rest of the yellow area with the help of newspaper and tape, so that black color doesn't get painted.
6. Spray the black paint inside the measured areas provided in the drawings and let it air dry for approximately 30 min.
7. Take measurement for the finishing box or the finishing area, which needs to be painted green to portray completion of the course. The box is of measurement 10”X10” square. Make sure you cover the rest of the black and yellow area, such that green color doesn't spill over black and yellow colors. Let it air dry for approximately 30min.
8. Apply white electrical tape in middle of the black track as a continuous line through out the path 2. (Refer to the drawings for measurements for the placement of the tape)
9. Apply white electrical tape in form of dashed line of about 3” long and 0.75” wide in the middle of the path 1 (Refer to drawings zigzag path).
10. Take hard board with rough side to construct the bridge with elevation of 3”. The bridge inclination consists of hardboard approximately 8” wide.

11. Attach the inclined/declining part with base using angle clamps on each corner of both boards. And paint the bridge with black paint. Attach it to the main plywood board with ½” screws as shown in the drawings. Also attach support pillars under the bridge while attaching to the board.

12. Apply red tape across the course as checkpoints of 2”x0.25” size to display that the players would be awarded when successfully pass the checkpoints.
